## Marine Microbiology: Bioactive Compounds and Biotechnological Applications From Wiley-VCH

Deliberately breaking with the classical biology-centered description of marine organisms and their products, this reference emphasizes microbial technology over basic biology, setting it apart from its predecessors. As such, it systematically covers the technology behind high-value compounds for use as pharmaceuticals, nutraceuticals or cosmetics, from prospecting to production issues.

Following a definition of the field, the book goes on to address all industrially important aspects of marine microbial biotechnology. The first main part contains a description of the major production organisms, from archaeobacteria to cyanobacteria to algae and symbionts, including their genetic engineering. The remaining four parts look at commercially important compounds produced by these microorganisms together with their applications. Throughout, the emphasis is on technological considerations, and the future potential of these organisms or compound classes is discussed. A valuable and forward-looking resource for innovative biotechnologists in industry as well as in academia.

About the Author

**Se-Kwon Kim** is Professor of Marine Biochemistry at Pukyong National University in Busan, South Korea. A graduate of PKNU, he conducted his postdoctoral studies at the University of Illinois (USA), and was a visiting scientist at the Memorial University of Newfoundland (Canada). His major research interests are the investigation and development of bioactive substances derived from marine organisms and their application as cosmeceuticals and nutraceuticals. Professor Kim is the current editor-in-chief of the *Korean Journal of Marine Bioscience and Biotechnology*. He has authored over 450 research papers, holds 72 patents, and has written or edited more than 30 books.

## **Users Review**

**From reader reviews:**

**James Shaw:**

The book *Marine Microbiology: Bioactive Compounds and Biotechnological Applications* has a lot of knowledge on it. So when you check out this book you can get a lot of benefit. The book was published by the very famous author. Tom makes some research previous to write this book. This kind of book very easy to read you can obtain the point easily after perusing this book.

Are you kind of hectic person, only have 10 or 15 minute in your moment to upgrading your mind proficiency or thinking skill actually analytical thinking? Then you are having problem with the book compared to can satisfy your short space of time to read it because all this time you only find e-book that need more time to be study. *Marine Microbiology: Bioactive Compounds and Biotechnological Applications* can be your answer mainly because it can be read by a person who have those short spare time problems.

**Donald Goodman:**

The book untitled Marine Microbiology: Bioactive Compounds and Biotechnological Applications contain a lot of information on the idea. The writer explains your ex idea with easy way. The language is very clear to see all the people, so do not really worry, you can easy to read the idea. The book was compiled by famous author. The author will take you in the new era of literary works. If you want to buy the e-book, you can open their official web-site and also order it. Have a nice read.

**Georgia Yorke:**

Beside this Marine Microbiology: Bioactive Compounds and Biotechnological Applications in your phone, it could give you a way to get closer to the new knowledge or information. The information and the knowledge you might got here is fresh through the oven so don't be worry if you feel like an aged people live in narrow town. It is good thing to have Marine Microbiology: Bioactive Compounds and Biotechnological Applications because this book offers for your requirements readable information. Do you sometimes have book but you would not get what it's facts concerning. Oh come on, that will not happen if you have this in the hand. The Enjoyable agreement here cannot be questionable, like treasuring beautiful island. Techniques you still want to miss the item? Find this book and also read it from at this point!
