### Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics)

From Brand: Springer

**Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics**) From Brand: Springer

*Topological Modelling of Nanostructures and Extended Systems* completes and expands upon the previously published title within this series: *The Mathematics and Topology of Fullerenes* (Vol. 4, 2011) by gathering the latest research and advances in materials science at nanoscale. It introduces a new speculative area and novel concepts like topochemical reactions and colored reactive topological indices and provides a better understanding of the physical-chemical behaviors of extended systems. Moreover, a charming new family of space-filling fullerenic crystals is here analyzed for the first time.

Particular attention is given to the fundamental influences exercised by longrange connectivity topological mechanisms on the chemical and physical properties of carbon nanostructures. Systems consisting in graphenic layers with structural and topological defects are investigated in their electronic and magnetic behaviors also in presence of metallic particles.

More specifically, the book focuses on:

- Electronic Properties of low dimensional nanostructures including negativelycurved carbon surfaces;

Pariser-Parr-Pople model hamiltonian approach to graphene studies;Topochemistry and Toporeactcivity of extended sp2-nanocarbons: PAH,fullerenes, nanoribbons, Moebius-like nanoribbons, nanotubes and grapheme;

- Novel class of crystal networks arising from spanning fullerenes;

- Nanostructures and eigenvectors of matrices and an extended treatise of topological invariants;

- Enumeration hetero-fullerenes by Polya theory.

*Topological Modelling of Nanostructures and Extended Systems* represents a valuable resource to advances graduates and researchers working in mathematics, chemistry, physics and material science.

From the Back Cover

Topological Modelling of Nanostructures and Extended Systems completes and expands upon the previously published title within this series: The Mathematics and Topology of Fullerenes (Vol. 4, 2011) by gathering the latest research and advances in materials science at nanoscale. It introduces a new speculative area and novel concepts like topochemical reactions and colored reactive topological indices and provides a better understanding of the physical-chemical behaviors of extended systems. Moreover, a charming new family of space-filling fullerenic crystals is here analyzed for the first time.Particular attention is given to the fundamental influences exercised by long-range connectivity topological mechanisms on the chemical and physical properties of carbon nanostructures. Systems consisting in graphenic layers with structural and topological defects are investigated in their electronic and magnetic behaviors also in presence of metallic particles.

More specifically, the book focuses on:

• Electronic Properties of low dimensional nanostructures including negatively-curved carbon surfaces; Pariser-Parr-Pople model hamiltonian approach to graphene studies;

•Topochemistry and Toporeactcivity of extended sp2-nanocarbons: PAH, fullerenes, nanoribbons, Moebiuslike nanoribbons, nanotubes and grapheme;

·Novel class of crystal networks arising from spanning fullerenes;

Nanostructures and eigenvectors of matrices and an extended treatise of topological invariants;

·Enumeration hetero-fullerenes by Polya theory.

Topological Modelling of Nanostructures and Extended Systems represents a valuable resource to advances graduates and researchers working in mathematics, chemistry, physics and material science.

#### About the Author

Prof. Dr. Ali Reza Ashrafi, University of Kashan, Department of Mathematics, Kashan, Iran

Prof. Dr. Franco Cataldo, Tor Vergata University, Department of Materials Science, Rome, Italy

Prof. Dr. Ali Iranmanesh, Tarbiat Modares University, Department of Mathematics, Tehran, Iran

Dr. Ottorino Ori, Actinium Chemical Research, Rome, Italy

#### **Users Review**

#### From reader reviews:

#### Katherine Humphrey:

Now a day people that Living in the era exactly where everything reachable by connect to the internet and the resources in it can be true or not call for people to be aware of each info they get. How a lot more to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Reading through a book can help folks out of this uncertainty Information particularly this Topological Modelling of

Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics) book as this book offers you rich information and knowledge. Of course the information in this book hundred per-cent guarantees there is no doubt in it you know.

#### **Billy Golden:**

Reading a publication can be one of a lot of activity that everyone in the world enjoys. Do you like reading book and so. There are a lot of reasons why people like it. First reading a e-book will give you a lot of new information. When you read a e-book you will get new information because book is one of several ways to share the information or their idea. Second, reading through a book will make a person more imaginative. When you reading a book especially fiction book the author will bring you to definitely imagine the story how the character types do it anything. Third, it is possible to share your knowledge to other folks. When you read this Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics), you are able to tells your family, friends as well as soon about yours reserve. Your knowledge can inspire different ones, make them reading a reserve.

#### Joan Hanson:

Reading a publication tends to be new life style in this era globalization. With looking at you can get a lot of information which will give you benefit in your life. Having book everyone in this world can share their idea. Guides can also inspire a lot of people. Many author can inspire all their reader with their story or maybe their experience. Not only situation that share in the books. But also they write about the ability about something that you need case in point. How to get the good score toefl, or how to teach your young ones, there are many kinds of book which exist now. The authors these days always try to improve their expertise in writing, they also doing some research before they write for their book. One of them is this Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics).

#### Kathleen Huckaby:

Many people spending their time period by playing outside along with friends, fun activity using family or just watching TV the entire day. You can have new activity to shell out your whole day by studying a book. Ugh, do you consider reading a book can definitely hard because you have to bring the book everywhere? It fine you can have the e-book, getting everywhere you want in your Smartphone. Like Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics) which is keeping the e-book version. So , try out this book? Let's see.

### Download and Read Online Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics) From Brand: Springer #N4JE2K1T5GD

### Read Topological Modelling of Nanostructures and Extended Systems (Carbon Materials: Chemistry and Physics) From Brand: Springer for online ebook
