It Eats Planets. And It's Here.

It starts when Venus explodes into a brilliant cloud of dust and debris, showering Earth with radiation and bizarre particles that wipe out all the crops and half the life in the oceans, and fry the ozone layer. Days later, a few specks of moon rock kicked up from the last Apollo mission fall upon a lava crag in Scotland. That's all it takes . . .

Suddenly, the ground itself begins melting into pools of dust that grow larger every day. For what has demolished Venus, and now threatens Earth itself, is part machine, part life-form: a nano-virus, dubbed *Moonseed*, that attacks planets.

Four scientists are all that stand between Moonseed and Earth's extinction, four brilliant minds that must race to cut off the virus and save what's left of Earth--a pulse-stopping battle for discovery that will lead them from the Earth's inner core to a daredevil Moon voyage that could save, or damn, us all.

Editorial Review

Amazon.com Review

Stephen Baxter, the much-lauded author of *Voyage* and *Titan*, has been praised as a sci-fi writer who gets the science right. This rigor and research are clearly evident in *Moonseed*, a tale with high-energy physics and space-travel technology in starring roles. It's Baxter's boyish enthusiasm for science--especially space travel--that makes *Moonseed* so involving.

A world-class disaster epic worthy of any Saturday matinee, *Moonseed* opens with the spectacular, explosive death of Venus, an event requiring energy a thousand billion times the world's nuclear arsenal. As the radioactive blast from the late Venus reaches Earth, scientists scramble to attribute a cause, with massless black holes and elementary particles the size of bacteria pointing towards some sort of superstring as the smoking gun. The pace quickens when the substance that may have caused the demise of Venus is accidentally introduced to Earth. This substance, dubbed *moonseed*, acts as a geological lubricant: processes that normally take millions of years occur in mere months with moonseed in the picture. Once Scotland and the state of Washington get gobbled up by this rock-eating, 10th-dimensional nano-lifeform, all hell breaks loose and the search turns towards finding safe refuge for humanity on the Moon. The book's second half is a seat-of-your-pants, what-if exploration of space travel and terraforming.

An over-the-top doomsday yarn by some measures, *Moonseed* keeps your feet on the ground with good science, good characters, and a good story. --Paul Hughes

From Kirkus Reviews

Another massive near-future, near-space yarn from the author of *Voyage* (1997). As NASA space jockey Geena Bourne acrimoniously splits from her geologist husband, Henry Meacher, Venus explodes into nova-like brilliance. The explanation, scientists think, involves superstrings: the planet's wreckage produces massless black holes. Geena returns to work, while Henry travels to Edinburgh to investigate a large Moon rock gathered by the last Apollo mission 30 years ago and left untouched since. Silvery ``Moonseed" dust escapes from the lab, however, and ``infects" the ancient volcanic rocks underlying the city, converting them into novel crystalline forms using superstring energies. Within days, Edinburgh is engulfed by volcanic eruptions. Moonseed spreads rapidly around the globe, chewing up the planet's crust, and producing more terrestrial turbulence. Henry, who's developing a theory (is Moonseed some sort of hive organism? or alien nanotechnology that converts planets into spaceships?) must get to the Moon to gather crucial evidence. Geena's the best pilot available, though rundown NASA will need lots of Russian hardware and technical help. Henry confirms that the Moon, too, is infected with Moonseed, but something massive is inhibiting its full development. With Earth doomed to meltdown, the Moons clearly the only safe haven for what's left of humanity. But can it be made habitable in time to receive millions of refugees? Baxter revels in the gritty, practical details of space flight and moon-walking; his alien threat is an intriguing and original one, though unconvincingly developed. But the padding (too many minor characters and unnecessary scenes) slows the pace to a crawl. (Movie rights to The Bridge Production Company) -- Copyright ©1998, Kirkus Associates, LP. From reader reviews:

Ronnie Hamilton:

Have you spare time to get a day? What do you do when you have more or little spare time? Sure, you can choose the suitable activity for spend your time. Any person spent all their spare time to take a wander, shopping, or went to often the Mall. How about open or even read a book titled Moonseed (NASA Trilogy)? Maybe it is to become best activity for you. You recognize beside you can spend your time with the favorite's book, you can more intelligent than before. Do you agree with their opinion or you have various other opinion?

James Gabriel:

What do you concerning book? It is not important with you? Or just adding material if you want something to explain what yours problem? How about your spare time? Or are you busy particular person? If you don't have spare time to do others business, it is gives you the sense of being bored faster. And you have spare time? What did you do? All people has many questions above. They must answer that question because just their can do in which. It said that about e-book. Book is familiar in each person. Yes, it is right. Because start from on guardería until university need that Moonseed (NASA Trilogy) to read.

Jeanie Hynes:

People live in this new day time of lifestyle always try to and must have the free time or they will get large amount of stress from both lifestyle and work. So , if we ask do people have time, we will say absolutely without a doubt. People is human not a robot. Then we inquire again, what kind of activity have you got when the spare time coming to anyone of course your answer will certainly unlimited right. Then do you ever try this one, reading publications. It can be your alternative inside spending your spare time, typically the book you have read is Moonseed (NASA Trilogy).

Cliff Boyd:

Reading can called imagination hangout, why? Because when you find yourself reading a book specially book entitled Moonseed (NASA Trilogy) your thoughts will drift away trough every dimension, wandering in each aspect that maybe mysterious for but surely can be your mind friends. Imaging each word written in a guide then become one application form conclusion and explanation in which maybe you never get previous to. The Moonseed (NASA Trilogy) giving you a different experience more than blown away your brain but also giving you useful facts for your better life in this era. So now let us teach you the relaxing pattern here is your body and mind will be pleased when you are finished reading through it, like winning a. Do you want to try this extraordinary spending spare time activity?
