## **Editorial Review**

### **Review**

“This is a wonderful book that many will justifiably recommend for undergraduate and early postgraduate students interested in the integrated management of freshwaters; the new edition will not disappoint, it is a thorough

overhaul and substantial improvement on an already established and useful text book.” (*J Paleolimnol*, 5 October 2011)

“This new edition of the textbook provides a comprehensive and stimulating introduction to rivers, lakes and wetlands. It was written as the basis for a complete course on freshwater ecology and hence is accessible to undergraduate and early postgraduate students. Its strongest feature is the promotion of an integrated approach to freshwater systems and science.” (*Austral Ecology*, 1 November 2012)

"[This book] is excellent for broadening the understanding of readers with some prior knowledge." (*CHOICE*, January 2011)

### **From the Back Cover**

Freshwaters are utterly fascinating. They are the threads that stitch together the landscapes of the Earth with a myriad of two-way exchanges involving chemical substances, and organisms from algae and insects to hippopotami and bears. At the same time they suffer the pollutant consequences of human abuses of the land, and are perhaps the most damaged of the Earth's ecosystems. This book, a completely re-written edition of a text book widely used for the past thirty years, continues a tradition of clear, jargon-free writing, a richness of examples and a passionate celebration of rivers, lakes and wetlands. It pulls no punches in describing the threats to freshwaters, whilst revelling in the richness of their fundamental ecology. It gives equal treatment to polar, cold and warm temperate and tropical systems, so avoiding any bias towards any particular region. It is truly a text book for the world's trainee freshwater ecologists.

### **About the Author**

Brian Moss has researched or taught freshwater ecology on six continents over nearly fifty years, specialising in lake restoration, eutrophication and climate change. He retired recently as Holbrook Gaskell Professor of Botany at the University of Liverpool, but remains very active in freshwater affairs.
