Statistical Methods for Geography By Peter A. Rogerson

Statistical Methods for Geography is a systematic introduction to the essential techniques that all students must understand to complete a module in statistical analysis. It provides an integrated overview of spatial data and spatial data analysis.

Key features include:

- An applied focus on methods for geographers: the text presents a detailed discussion of regression analysis and autocorrelation - the principal methods of statistical inference used in geography.
- An introduction to the principles of spatial analysis and spatial patterns, including probability and probability models; hypothesis testing and sampling; analysis of variance; point patterns; and patterns in areal data.

Editorial Review

Review

Peter Rogerson has provided us with an accessible introduction to the main statistical procedures used by geographers, along with valuable illustrations of how these can be applied using SPSS for Windows. As a primer in statistical analysis for geographers it will be widely used and appreciated

Professor Ron Johnston
University of Bristol

It should be stated on the outset: this is an excellent textbook recommended for all geographers, students and teachers alike. The book excels in many aspects: its content is rich and well balanced, its clarity is superb, and it is replete with examples and exercises. The book is user-friendly to students who are interested in understanding the application of statistical tests and in properly interpreting the results, rather than in delving in the mathematics involved.

Shaul Krakover
Geography Research Forum

About the Author

I am Professor of Geography and Biostatistics at the University at Buffalo. My research interests are in the area of demography and population change, epidemiology, spatial statistics, and spatial analysis. My current work is focused upon the development of new methods for the quick detection of newly emergent clusters in geographic data (for example, how does one determine as quickly as possible whether there is a new cluster of crime or disease?).

Users Review

From reader reviews:

Marietta Allred:

Book is to be different for each and every grade. Book for children until adult are different content. As it is known to us that book is very important usually. The book Statistical Methods for Geography had been making you to know about other information and of course you can take more information. It is extremely advantages for you. The reserve Statistical Methods for Geography is not only giving you considerably more new information but also to be your friend when you truly feel bored. You can spend your personal spend time to read your reserve. Try to make relationship with all the book Statistical Methods for Geography. You never experience lose out for everything in case you read some books.

Bert Martinez:

Reading a reserve tends to be new life style in this particular era globalization. With reading you can get a lot of information that can give you benefit in your life. Along with book everyone in this world could share their idea. Publications can also inspire a lot of people. Lots of author can inspire all their reader with their story or maybe their experience. Not only situation that share in the textbooks. But also they write about the data about something that you need case in point. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that you can get now. The authors in this world always try to improve their expertise in writing, they also doing some study before they write to their book. One of them is this Statistical Methods for Geography.

Sheila Davis:

The reason? Because this Statistical Methods for Geography is an unordinary book that the inside of the publication waiting for you to snap this but latter it will zap you with the secret this inside. Reading this book next to it was fantastic author who also write the book in such amazing way makes the content on the inside easier to understand, entertaining way but still convey the meaning completely. So , it is good for you for not hesitating having this ever again or you going to regret it. This amazing book will give you a lot of gains than the other book include such as help improving your skill and your critical thinking approach. So , still want to hold off having that book? If I ended up you I will go to the publication store hurriedly.

Raymond Brown:

Is it you actually who having spare time and then spend it whole day by watching television programs or just lying on the bed? Do you need something new? This Statistical Methods for Geography can be the response, oh how comes? A book you know. You are and so out of date, spending your extra time by reading in this new era is common not a geek activity. So what these ebooks have than the others?
