Building Internet of Things with the Arduino (Volume 1) By Charalampos Doukas

The Internet of Things (IoT) is a global network that links physical objects using Cloud computing, web applications, and network communications. It allows devices to communicate with each other, access information on the Internet, store and retrieve data, and interact with users, creating smart, pervasive and always-connected environments.

Despite the Internet of Things being a relatively new concept, there are already a few open platforms available that enable remote and seamless management and visualization of sensor data: Cosm, Nimbits, and ThingSpeak are just a few examples. And Arduino works with all of them.

The Arduino is an incredibly flexible micro-controller and development environment that cannot only be used to control devices, but can also be used to read data from all kinds of sensors. Its simplicity and extensibility, in addition to its great success and adoption by users, has led to the development of a variety of hardware extensions and software libraries that enable wired and wireless communication with the Internet. Arduino is the ideal open hardware platform for experimenting with the world of the Internet of Things.

Make your Arduino talk to the world!

This book will provide you with all the information you need to design and create your own Internet of Things (IoT) applications using the Arduino platform.

More specifically, you will learn:

- About the Internet of Things and Cloud Computing concepts
- About open platforms that allow you to store your sensor data on the Cloud (like Cosm, Nimbits and many more)
- The basic usage of Arduino environment for creating your own embedded projects at low cost
- How to connect your Arduino with your Android phone and send data over the Internet
- How to connect your Arduino directly to the Internet and talk to the Cloud
- How to reprogram your Arduino microcontroller remotely through the Cloud

Detailed Table of Contents can be found at:

<http://www.buildinginternetofthings.com>

Updated version (v1.1): Contains corrections, improvements and updates about IoT Platforms!

Editorial Review

Users Review

From reader reviews:

Blanche Watson:

This Building Internet of Things with the Arduino (Volume 1) usually are reliable for you who want to become a successful person, why. The reason why of this Building Internet of Things with the Arduino (Volume 1) can be one of the great books you must have is definitely giving you more than just simple reading through food but feed you actually with information that perhaps will shock your earlier knowledge. This book is definitely handy, you can bring it everywhere and whenever your conditions both in e-book and printed kinds. Beside that this Building Internet of Things with the Arduino (Volume 1) giving you an enormous of experience for instance rich vocabulary, giving you tryout of critical thinking that we know it useful in your day action. So , let's have it appreciate reading.

Rodney Richardson:

People live in this new moment of lifestyle always make an effort to and must have the time or they will get large amount of stress from both everyday life and work. So , when we ask do people have spare time, we will say absolutely without a doubt. People is human not really a robot. Then we question again, what kind of activity do you possess when the spare time coming to you of course your answer may unlimited right. Then do you try this one, reading publications. It can be your alternative throughout spending your spare time, the particular book you have read is usually Building Internet of Things with the Arduino (Volume 1).

Jose Weitzman:

Building Internet of Things with the Arduino (Volume 1) can be one of your nice books that are good idea. All of us recommend that straight away because this publication has good vocabulary that may increase your knowledge in vocabulary, easy to understand, bit entertaining but nonetheless delivering the information. The article writer giving his/her effort to place every word into enjoyment arrangement in writing Building Internet of Things with the Arduino (Volume 1) but doesn't forget the main place, giving the reader the hottest as well as based confirm resource information that maybe you can be one among it. This great information can drawn you into new stage of crucial considering.

Walter Son:

A lot of people said that they feel weary when they reading a guide. They are directly felt that when they get a half portions of the book. You can choose typically the book Building Internet of Things with the Arduino (Volume 1) to make your own reading is interesting. Your personal skill of reading talent is developing when

you such as reading. Try to choose easy book to make you enjoy you just read it and mingle the impression about book and examining especially. It is to be very first opinion for you to like to available a book and read it. Beside that the e-book Building Internet of Things with the Arduino (Volume 1) can to be your new friend when you're truly feel alone and confuse with the information must you're doing of this time.
