Disheartened by the shrink-wrapped, Styrofoam-packed state of contemporary supermarket fruits and vegetables, many shoppers hark back to a more innocent time, to visions of succulent red tomatoes plucked straight from the vine, gleaming orange carrots pulled from loamy brown soil, swirling heads of green lettuce basking in the sun.

With *Hybrid*, Noel Kingsbury reveals that even those imaginary perfect foods are themselves far from anything that could properly be called natural; rather, they represent the end of a millennia-long history of selective breeding and hybridization. Starting his story at the birth of agriculture, Kingsbury traces the history of human attempts to make plants more reliable, productive, and nutritious—a story that owes as much to accident and error as to innovation and experiment. Drawing on historical and scientific accounts, as well as a rich trove of anecdotes, Kingsbury shows how scientists, amateur breeders, and countless anonymous farmers and gardeners slowly caused the evolutionary pressures of nature to be supplanted by those of human needs—and thus led us from sparse wild grasses to succulent corn cobs, and from mealy, white wild carrots to the juicy vegetables we enjoy today. At the same time, Kingsbury reminds us that contemporary controversies over the Green Revolution and genetically modified crops are not new; plant breeding has always had a political dimension.

A powerful reminder of the complicated and ever-evolving relationship between humans and the natural world, *Hybrid* will give readers a thoughtful new perspective on—and a renewed appreciation of—the cereal crops, vegetables, fruits, and flowers that are central to our way of life.

Editorial Review

Review

"A magnificent achievement-Kingsbury tells this gripping story, with a large cast of characters across the entire span of human civilization, with wit, passion, and erudition." -- Tim Richardson, author of *The Arcadian Friends*

I will never look at a slice of bread or grain of rice the same way, having read *Hybrid*. By recounting the history of plant breeding, the author has revealed the many choices made in creating the crops of today and yesterday, and challenges us to think about our choices for tomorrow. Cathy Maloney, author of *Chicago Gardens* -- Cathy Maloney, author of *Chicago Gardens*

In plant breeding, just as in evolution, genetic variety is the raw material of success. *Hybrid* is the story of how the genes that make a fat corn cob, a luscious apple, a brilliantly orange carrot or a high yielding strain of rice have traveled by serpentine paths to reach the genomes of the crops that we so depend on and yet so take for granted. In *Hybrid* we learn that there was a green revolution in eleventh-century China when a visionary emperor imported new strains of rice from Indochina; how working men in nineteenth-century Britain made a sport of competitive gooseberry breeding, and how a German doctor discovered hybrid vigor in plants. *Hybrid* the book displays, like hybrids themselves, all the marvelous fruit of miscellany. Jonathan Silvertown, author of *An Orchard Invisible: A Natural History of Seeds* -- Jonathan Silvertown

A magnificent achievement Kingsbury tells this gripping story, with a large cast of characters across the entire span of human civilization, with wit, passion, and erudition. Tim Richardson, author of *The Arcadian Friends: Inventing the English Landscape Garden* -- Tim Richardson, author of *The Arcadian Friends*

Thoughtful, well researched and refreshingly broad in scope, Noel Kingsbury's *Hybrid* took me out of my immediate area of expertise (plants and garden history) and opened my eyes to the way previously unsung plant breeders have transformed societies. Accessible to specialists and non-specialists, it should be essential reading for anyone wishing to take an informed view on the future direction of biotechnology. Jennifer Potter, author of *Strange Blooms: The Curious Lives and Adventures of the John Tradescants* -- Jennifer Potter, author of *Strange Blooms*
