**Universe: The Solar System** By Roger Freedman, Robert Geller, William J. Kaufmann

Universe: *The Solar System*, Fifth Edition, contains chapters from the following sections of Freedman, Kaufmann, and Geller's *Universe*, Tenth Edition:

**Introducing Astronomy**

**Planets and Moons**

Plus the following chapters:

**Our Star: The Sun**

**The Search for Extraterrestrial Life**

## **Editorial Review**

### About the Author

**Roger A. Freedman** is a Lecturer in Physics at the University of California, Santa Barbara.

Dr. Freedman was an undergraduate at the University of California campuses in San Diego and Los Angeles, and did his doctoral research in theoretical nuclear physics at Stanford University under the direction of Professor J. Dirk Walecka. He came to UCSB in 1981 after three years teaching and doing research at the University of Washington.

At UCSB, Dr. Freedman has taught in both the Department of Physics and the College of Creative Studies, a branch of the university intended for highly gifted and motivated undergraduates. He has published research in nuclear physics, elementary particle physics, and laser physics. In recent years, he has helped to develop computer-based tools for learning introductory physics and astronomy and helped pioneer the use of classroom response systems and the "flipped" classroom model at UCSB. He is co-author of three introductory textbooks: *University Physics* (Pearson), *Universe* (Freeman), and *Investigating Astronomy* (Freeman).

Dr. Freedman holds a commercial pilot's license. He was one of the early organizers of the San Diego Comic-Con, now the world's largest popular culture convention. His likeness has appeared as a supervillain and mad scientist in both DC and Marvel Comics.

**Robert M. Geller** teaches and conducts research in astrophysics at the University of California, Santa Barbara, where he also obtained his Ph.D.

His doctoral research was in observational cosmology under Professor Robert Antonucci. Using data from the Hubble Space Telescope, he is currently involved in a search for bursts of light that are predicted to occur when a supermassive black hole consumes a star. His other project, in biomedicine, explores the use of magnetotactic bacteria to enhance the effectiveness of radiation therapy in treating cancer. Dr. Geller also has a strong emphasis on education, and he received the Distinguished Teaching Award at UCSB in 2003.

His hobbies include rock climbing, and he built an unusual telescope with lenses made of water.

**William J. Kaufman III** was author of the first four editions of *Universe*. Born in New York City on December 27, 1942, he often visited the magnificent Hayden Planetarium as he was growing up. Dr. Kaufmann earned his bachelor's degree magna cum laude in physics from Adelphi University in 1963, a master's degree in physics from Rutgers in 1965, and a Ph.D. in astrophysics from Indiana University in 1968. At 27 he became the youngest director of any major planetarium in the United States when he took the helm of the Griffith Observatory in Los Angeles. During his career he also held positions at San Diego State University, UCLA, Caltech, and the University of Illinois. Throughout his professional life as a scientist and educator, Dr. Kaufmann worked to bridge the gap between the scientific community and the general public to help the public share in the advances of astronomy. A prolific author, his many books include *Black Holes and Warped Spacetime*, *Relativity and Cosmology*, *The Cosmic Frontiers of General Relativity*, *Exploration of the Solar System*, *Planets and Moons*, *Stars and Nebulas*, *Galaxies and Quasars*, and *Supercomputing and the Transformation of Science*. Dr. Kaufmann died in 1994."

## **Users Review**

### **From reader reviews:**

#### **Hyacinth Mills:**

The book Universe: The Solar System can give more knowledge and information about everything you want. Why then must we leave a very important thing like a book Universe: The Solar System? A number of you have a different opinion about book. But one aim in which book can give many data for us. It is absolutely correct. Right now, try to closer using your book. Knowledge or information that you take for that, it is possible to give for each other; you could share all of these. Book Universe: The Solar System has simple shape however you know: it has great and large function for you. You can look the enormous world by open up and read a reserve. So it is very wonderful.

#### **Novella Tinch:**

Nowadays reading books are more than want or need but also turn into a life style. This reading behavior give you lot of advantages. Associate programs you got of course the knowledge even the information inside the book that will improve your knowledge and information. The info you get based on what kind of guide you read, if you want have more knowledge just go with knowledge books but if you want sense happy read one together with theme for entertaining for example comic or novel. The Universe: The Solar System is kind of e-book which is giving the reader unpredictable experience.

#### **Michael Stanford:**

Your reading sixth sense will not betray you actually, why because this Universe: The Solar System guide written by well-known writer we are excited for well how to make book that could be understand by anyone who read the book. Written with good manner for you, leaking every ideas and creating skill only for eliminate your hunger then you still question Universe: The Solar System as good book not simply by the cover but also by content. This is one book that can break don't assess book by its protect, so do you still needing another sixth sense to pick this kind of!? Oh come on your examining sixth sense already said so why you have to listening to a different sixth sense.

#### **Jason Scott:**

That publication can make you to feel relax. That book Universe: The Solar System was bright colored and of course has pictures on the website. As we know that book Universe: The Solar System has many kinds or style. Start from kids until teens. For example Naruto or Private investigator Conan you can read and think that you are the character on there. Therefore not at all of book are usually make you bored, any it can make you feel happy, fun and unwind. Try to choose the best book for you personally and try to like reading which.
