The Art of Capacity Planning: Scaling Web Resources By John Allspaw

Success on the web is measured by usage and growth. Web-based companies live or die by the ability to scale their infrastructure to accommodate increasing demand. This book is a hands-on and practical guide to planning for such growth, with many techniques and considerations to help you plan, deploy, and manage web application infrastructure.

The Art of Capacity Planning is written by the manager of data operations for the world-famous photo-sharing site Flickr.com, now owned by Yahoo! John Allspaw combines personal anecdotes from many phases of Flickr's growth with insights from his colleagues in many other industries to give you solid guidelines for measuring your growth, predicting trends, and making cost-effective preparations.

Topics include:

- Evaluating tools for measurement and deployment
- Capacity analysis and prediction for storage, database, and application servers
- Designing architectures to easily add and measure capacity
- Handling sudden spikes
- Predicting exponential and explosive growth
- How cloud services such as EC2 can fit into a capacity strategy

In this book, Allspaw draws on years of valuable experience, starting from the days when Flickr was relatively small and had to deal with the typical growth pains and cost/performance trade-offs of a typical company with a Web presence. The advice he offers in *The Art of Capacity Planning* will not only help you prepare for explosive growth, it will save you tons of grief.

Editorial Review

About the Author

John Allspaw is currently Operations Engineering Manager at Flickr, the popular photo site. He has had extensive experience working with growing web sites since 1999. These include online news magazines (Salon.com, InfoWorld.com, Macworld.com) and social networking sites that experienced extreme growth (Friendster and Flickr). During his time at Friendster, traffic increased 5X. He was responsible for their transition from a couple dozen servers in a failing data center to over 400 machines across two data centers, and the complete redesign of the backing infrastructure. When he joined Flickr, they had 10 servers in a tiny data center in Vancouver; they are now located in multiple data centers across the US. Prior to his web experience, Allspaw worked in modeling and simulation as a mechanical engineer doing car crash simulations for the NHTSA.

Users Review

From reader reviews:

Joseph Tucker:

What do you with regards to book? It is not important along? Or just adding material when you want something to explain what you problem? How about your free time? Or are you busy man? If you don't have spare time to complete others business, it is gives you the sense of being bored faster. And you have time? What did you do? Every person has many questions above. They should answer that question because just their can do that. It said that about guide. Book is familiar in each person. Yes, it is proper. Because start from on guardería until university need this The Art of Capacity Planning: Scaling Web Resources to read.

Zenaida Jackson:
