Multiscale Hydrologic Remote Sensing: Perspectives and Applications From CRC Press

Multiscale Hydrologic Remote Sensing: Perspectives and Applications

integrates advances in hydrologic science and innovative remote sensing technologies. Raising the visibility of interdisciplinary research on water resources, it offers a suite of tools and platforms for investigating spatially and temporally continuous hydrological variables and processes.

Illustrated in color, this book examines components in the hydrologic cycle with a range of space and time scales. Organized into five parts, it explores hydrologic remote sensing at the local, urban, watershed, and regional scales, as well as the continental and global scale. Contributors address questions such as

- What are the local, watershed, and regional differences in soil moisture and evapotranspiration when using different measurement methods and models?
- How can we fit the scenarios of global warming potential and the remote sensing products of snow water equivalent into hydrologic modeling to address the changing flood and drought conditions in a watershed?
- How can we fuse the images collected by different satellites to improve the accuracy of predictions at the global scale?

Tackling these and many other topics, the book presents new techniques and methods for spaceborne, airborne, and ground-based measurements and mathematical modeling. It also discusses remote sensing image processing tools and features a wealth of real-world applications and case studies.

This book is a useful reference for students, professionals, scientists, and policy makers involved in the study of global change, hydrologic science, meteorology, climatology, biology, ecology, and the agricultural and forest sciences. It shows how hydrologic remote sensing technologies can be used more effectively to explore global change impacts and improve the design of hydrologic observatories.

Editorial Review

About the Author

Dr. Ni-Bin Chang is currently a professor with the Department of Civil, Environmental, and Construction Engineering at the University of Central Florida. He is also a senior member of the Institute of Electronics and Electrical Engineers (IEEE) and is affiliated with the IEEE Geoscience and Remote Sensing Society and the IEEE Computational Intelligence Society. He has earned the selectively awarded titles of Certificate of Leadership in Energy and Environment Design (LEED) in 2004, Board Certified Environmental Engineer (BCEE) in 2006, Diplomat of Water Resources Engineer (DWRE) in 2007, elected Member of the European Academy of Sciences (EAS) in 2008, elected Fellow of the American Society of Civil Engineers (ASCE) in 2009, and elected Fellow of the American Association for the Advancement of Science (AAAS) in 2011. He was one of the founders of International Society of Environmental Information Management and the former editor-in-chief of the *Journal of Environmental Informatics*. He is currently an editor, associate editor, or editorial board member of more than 30 international journals.

Dr. Yang Hong is currently an associate professor with the School of Civil Engineering and Environmental Sciences and Adjunct Faculty with the School of Meteorology at the University of Oklahoma. He directs the HyDROS Lab (Hydrometeorology and Remote Sensing Laboratory) at National Weather Center and also serves as the co-director of WaTER (Water Technology for Emerging Regions) center, faculty member with the Atmospheric Radar Research Center, and affiliated member of Center for Analysis and Prediction of Storms at the University of Oklahoma. He has served as Chair of the AGU-Hydrology Section Technique Committee on Precipitation (2008–2012) and as editor for three journals. He is the recipient of the NASA Award "for significant achievements in systematically promoting and accelerating the use of NASA scientific research results for societal benefits" by NASA Headquarter Administrator in 2008. He has extensively published in journals of remote sensing, hydrology, and hazards and has released several technologies to universities, governmental agencies, and private companies.

Users Review

From reader reviews:

Betty Borgen:

Here thing why this specific Multiscale Hydrologic Remote Sensing: Perspectives and Applications are different and trusted to be yours. First of all looking at a book is good but it depends in the content of computer which is the content is as yummy as food or not. Multiscale Hydrologic Remote Sensing: Perspectives and Applications giving you information deeper as different ways, you can find any reserve out there but there is no book that similar with Multiscale Hydrologic Remote Sensing: Perspectives and Applications. It gives you thrill studying journey, its open up your current eyes about the thing this happened in the world which is might be can be happened around you. It is easy to bring everywhere like in playground, café, or even in your technique home by train. If you are having difficulties in bringing the paper book maybe the form of Multiscale Hydrologic Remote Sensing: Perspectives and Applications in e-book

can be your choice.

Stacey Eades:

Information is provisions for folks to get better life, information these days can get by anyone from everywhere. The information can be a understanding or any news even a huge concern. What people must be consider while those information which is from the former life are difficult to be find than now's taking seriously which one works to believe or which one the actual resource are convinced. If you have the unstable resource then you buy it as your main information we will see huge disadvantage for you. All those possibilities will not happen with you if you take Multiscale Hydrologic Remote Sensing: Perspectives and Applications as the daily resource information.

Robert Cobb:

In this era globalization it is important to someone to find information. The information will make you to definitely understand the condition of the world. The condition of the world makes the information easier to share. You can find a lot of personal references to get information example: internet, magazine, book, and soon. You can view that now, a lot of publisher which print many kinds of book. Often the book that recommended to you is Multiscale Hydrologic Remote Sensing: Perspectives and Applications this reserve consist a lot of the information on the condition of this world now. This book was represented how can the world has grown up. The dialect styles that writer use for explain it is easy to understand. The actual writer made some exploration when he makes this book. This is why this book suitable all of you.

Harriette Corwin:

Reading a book make you to get more knowledge as a result. You can take knowledge and information coming from a book. Book is published or printed or illustrated from each source which filled update of news. Within this modern era like today, many ways to get information are available for anyone. From media social such as newspaper, magazines, science reserve, encyclopedia, reference book, new and comic. You can add your knowledge by that book. Isn't it time to spend your spare time to spread out your book? Or just searching for the Multiscale Hydrologic Remote Sensing: Perspectives and Applications when you essential it?
