Cancer: Principles & Practice of Oncology: Primer of the Molecular Biology of Cancer From LWW

Drawn from the content of the new Ninth Edition of **Cancer: Principles and Practice of Oncology**, this unique publication brings together the basic scientific information on the molecular biology of cancer. The format is designed to be useful both to research scientists interested in the study of cancer and to oncologists who need to understand these new developments that are having a profound impact on the care of patients with cancer. Leading scientists and clinicians in the field of molecular biology and clinical oncology have lent their expertise to this project. The text has been divided into two parts. Part I includes thirteen chapters that deal with the general principles of the molecular biology of cancer that provide the basic framework for an understanding of the behavior of cancer cells. Part II includes an up-to-date description of how this new information has affected the understanding of the biology of 19 of the most common cancers, with an emphasis on how these new findings have been translated to impact the management of cancer patients. This distinctive text provides a single concise source of information for scientists and clinicians in this rapidly developing field.

Editorial Review

Review

European Urology Today, Volume 17, Issue 1 -- "I was particularly taken by the chapters describing radiotherapy techniques, such as intensity modulated radiation therapy, and innovative surgical techniques. This textbook should be present in all medical oncological departments." European Urology Today Journal of the American Medical Association (JAMA), Volume 6, Issue 294 -- "Since its initial publication in 1982, Cancer: Principles and Practice of Oncology, edited by DeVita, Hellman, and Rosenberg, has been a staple reference text in the medical oncologist's library. With each edition, the numbers of topics and contributors have increased, and this, the seventh edition, is the most inclusive. The practice of oncology has changed dramatically over the last 3 decades. We have progressed from the discovery that Hodgkin disease can be cured with chemotherapy to the knowledge that a variety of cancers can be cured or have improved survival. We have seen new chemotherapeutic agents developed in just the last several years become standard therapy. Most exciting, though, is the new era of targeted therapies: antiangiogenesis agents, enzyme inhibitors, and monoclonal antibodies, among others. Certainly, while there are other worthy texts, for many oncologists, Cancer: Principles and Practice of Oncology has been a primary reference since our training. The seventh edition continues to be a reliable and thorough source defining contemporary cancer care."-Journal of the American Medical Association (JAMA)
