Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) By Xiaofan Li, Shouting Gao

This book examines surface rainfall processes through cloud-resolving modeling and quantitative analysis of surface rainfall budget, and summarizes modeling and analysis results over seven years. Includes a set of diagnostic precipitation equations.

Editorial Review

From the Back Cover

The book examines surface rainfall processes through cloud-resolving modeling and quantitative analysis of surface rainfall budget and summarizes modeling and analysis results in recent seven years. The book shows validation of precipitation modeling against observations and derives a set of diagnostic precipitation equations. The book provides detailed discussions of the applications of precipitation equations to the examination of effects of sea surface temperature, vertical wind shear, radiation, and ice clouds on torrential rainfall processes in the tropics and mid-latitudes, and to the studies of sensitivity of precipitation modeling to uncertainty of the initial conditions and to the estimate of precipitation efficiency. The book can be used as a text book for graduate students and will be beneficial to researchers and forecasters for precipitation process studies and operational forecasts.

Xiaofan Li is a physical scientist at the Center for Satellite Applications and Research, National Environmental Satellite, Data, and Information Service, National Oceanic and Atmospheric Administration, Camp Springs, Maryland, USA. He has a doctorate in meteorology from the University of Hawaii at Manoa, Honolulu, USA and a master's degree in meteorology from Nanjing University of Information Science and Technology, Nanjing, China.

Shouting Gao is a professor at the Laboratory of Cloud-Precipitation Physics and Severe Storm, Institute of Atmospheric Physics, Chinese Academy of Sciences, Beijing, China. He has a doctorate and a master's degree in meteorology from the Institute of Atmospheric Physics, Beijing, China.

About the Author

Users Review

From reader reviews:

Nathan Ware:

Book is usually written, printed, or highlighted for everything. You can realize everything you want by a reserve. Book has a different type. We all know that that book is important issue to bring us around the world. Adjacent to that you can your reading skill was fluently. A guide Precipitation Modeling and

Quantitative Analysis (Springer Atmospheric Sciences) will make you to always be smarter. You can feel much more confidence if you can know about everything. But some of you think this open or reading some sort of book make you bored. It is not necessarily make you fun. Why they may be thought like that? Have you looking for best book or acceptable book with you?

Catrina Hall:

What do you about book? It is not important along with you? Or just adding material when you need something to explain what you problem? How about your time? Or are you busy person? If you don't have spare time to perform others business, it is gives you the sense of being bored faster. And you have free time? What did you do? Everyone has many questions above. They have to answer that question because just their can do that. It said that about e-book. Book is familiar in each person. Yes, it is correct. Because start from on kindergarten until university need this Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) to read.

Teresa Dillard:

Reading can called imagination hangout, why? Because when you find yourself reading a book especially book entitled Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) your mind will drift away trough every dimension, wandering in each and every aspect that maybe unfamiliar for but surely will become your mind friends. Imaging every word written in a guide then become one contact form conclusion and explanation in which maybe you never get prior to. The Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) giving you an additional experience more than blown away the mind but also giving you useful facts for your better life in this particular era. So now let us present to you the relaxing pattern this is your body and mind are going to be pleased when you are finished reading it, like winning a game. Do you want to try this extraordinary shelling out spare time activity?

Sharon Wilson:

You could spend your free time to learn this book this guide. This Precipitation Modeling and Quantitative Analysis (Springer Atmospheric Sciences) is simple to create you can read it in the recreation area, in the beach, train and also soon. If you did not have much space to bring typically the printed book, you can buy the e-book. It is make you much easier to read it. You can save typically the book in your smart phone. Therefore there are a lot of benefits that you will get when one buys this book.
