Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology By Willem van Meurs

THEORY AND PRACTICE OF MODELING AND SIMULATING HUMAN PHYSIOLOGY

Written by a coinventor of the Human Patient Simulator (HPS) and past president of the Society in Europe for Simulation Applied to Medicine (SESAM), *Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology* is a compact and consistent introduction to this expanding field. The book divides the modeling and simulation process into five manageable steps--requirements, conceptual models, mathematical models, software implementation, and simulation results and validation.

A framework and a basic set of deterministic, continuous-time models for the cardiorespiratory system are provided. This timely resource also addresses advanced topics, including sensitivity analysis and setting model requirements as part of an encompassing simulation and simulator design. Practical examples provide you with the skills to evaluate and adapt existing physiologic models or create new ones for specific applications.

Coverage includes:

- Signals and systems
- Model requirements
- Conceptual models
- Mathematical models
- Software implementation
- Simulation results and model validation
- Cardiorespiratory system model
- Circulation
- Respiration
- Physiologic control
- Sensitivity analysis of a cardiovascular model
- Design of model-driven acute care training simulators

“Uniquely qualified to author such a text, van Meurs is one of the original developers of CAE Healthcare’s Human Patient Simulator (HPS). …His

understanding of mathematics, human physiology, pharmacology, control systems, and systems engineering, combined with a conversational writing style, results in a readable text. …The ample illustrations and tables also break up the text and make reading the book easier on the eyes. …concise yet in conversational style, with real-life examples. This book is highly recommended for coursework in physiologic modeling and for all who are interested in simulator design and development. The book pulls all these topics together under one cover and is an important contribution to biomedical literature." --*IEEE Pulse*, January 2014

"This book is written by a professional engineer who is unique in that he seems to have a natural understanding of 3 key areas as follows: the hardware involved with simulators, human physiology, and mathematical modeling. Willem van Meurs is one of the inventors of the model-driven human patient simulator (HPS), and so, he is very qualified to write this book. The book is written in a clear way, using the first person throughout, in a conversational manner, with a style that involves posing questions and answering them in subsequent text. …The book starts with a very useful introduction and background chapter, setting out the scene for the rest of the book. …I have used his book in enhancing my own talks and understanding human patient simulation and can strongly recommend it." --*Simulation in Healthcare* December, 2012

Editorial Review

About the Author

Willem van Meurs, Ph.D., is the co-inventor of the Human Patient Simulator. He is a consultant at Medical Education Technologies, Inc., and conducts modeling and simulation teaching and research at the University of Porto, Portugal. Dr. van Meurs was the president of the Society in Europe for Simulation Applied to Medicine from 2005-2007. He has published more than 20 full papers in peer-reviewed international journals and books and co-authored eight U.S. patents on modeling and simulation techniques.

Users Review

From reader reviews:

Barbara Clarke:

Now a day people who Living in the era just where everything reachable by interact with the internet and the resources in it can be true or not involve people to be aware of each details they get. How a lot more to be smart in receiving any information nowadays? Of course the answer then is reading a book. Reading through a book can help people out of this uncertainty Information specially this Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology book as this book offers you rich information and knowledge. Of course the information in this book hundred percent guarantees there is no doubt in it everbody knows.

Teresa Jones:

Reading a book can be one of a lot of activity that everyone in the world loves. Do you like reading book thus. There are a lot of reasons why people fantastic. First reading a reserve will give you a lot of new data. When you read a reserve you will get new information simply because book is one of various ways to share the information or their idea. Second, looking at a book will make an individual more imaginative. When you reading through a book especially fiction book the author will bring you to imagine the story how the characters do it anything. Third, you are able to share your knowledge to other individuals. When you read this Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology, you can tells your family, friends along with soon about yours reserve. Your knowledge can inspire different ones, make them reading a e-book.

Mary Grays:

People live in this new day time of lifestyle always aim to and must have the time or they will get lots of stress from both daily life and work. So , when we ask do people have free time, we will say absolutely yes. People is human not really a huge robot. Then we consult again, what kind of activity are there when the spare time coming to you of course your answer will certainly unlimited right. Then do you try this one, reading publications. It can be your alternative inside spending your spare time, typically the book you have

read will be Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology.

Carroll Boggess:

Do you have something that you want such as book? The publication lovers usually prefer to opt for book like comic, quick story and the biggest the first is novel. Now, why not hoping Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology that give your pleasure preference will be satisfied by simply reading this book. Reading practice all over the world can be said as the opportinity for people to know world far better then how they react towards the world. It can't be explained constantly that reading addiction only for the geeky man or woman but for all of you who wants to always be success person. So , for all of you who want to start reading through as your good habit, you could pick Modeling and Simulation in Biomedical Engineering: Applications in Cardiorespiratory Physiology become your own personal starter.
