**Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields** By Rolf-Dieter Reiss, Michael Thomas

Statistical analysis of extreme data is vital to many disciplines including hydrology, insurance, finance, engineering and environmental sciences. This book provides a self-contained introduction to parametric modeling, exploratory analysis and statistical inference for extreme values. For this Third Edition, the entire text has been thoroughly updated and rearranged to meet contemporary requirements, with new sections and chapters address such topics as dependencies, the conditional analysis and the multivariate modeling of extreme data. New chapters include An Overview of Reduced-Bias Estimation; The Spectral Decomposition Methodology; About Tail Independence; and Extreme Value Statistics of Dependent Random Variables.

## **Editorial Review**

### **Review**

"The book is well written. It assumes a knowledge of statistics, but many of the ideas and techniques can be used by a nonstatistician. As a handbook for XTREMES, it is excellent, and I recommend it highly."

### **-Computing Reviews**

"The present book is a valuable contribution to the various theoretical and applied problems in the area of extreme value theory...a pleasure to read."

### **-Statistics & Decisions**

"The book is however much more than a manual for the program and it would provide an excellent introduction to the subject for any statistician looking for a practical introduction to the subject of extreme values."

### **- J. Time Series Analysis**

"With general statistics software, appropriate tools for the analysis of real extreme value problems are rarely provided. XTREMES excellently fills this gap in the statistics software market."

### **-Computational Statistics**

"For a practitioner from industry, insurance, or finance who is less concerned with understanding the underlying probability and more interested in applications, this new book will be a good buy."

### **-JASA**

"The book can be highly recommended to all who deal with statistics of extremes." - **Zeitschrift fur Mathematik**

### **From the Back Cover**

The statistical analysis of extreme data is important for various disciplines, including hydrology, insurance, finance, engineering and environmental sciences. This book provides a self-contained introduction to the parametric modeling, exploratory analysis and statistical inference for extreme values.

The entire text of this third edition has been thoroughly updated and rearranged to meet the new requirements. Additional sections and chapters, elaborated on more than 100 pages, are particularly concerned with topics like dependencies, the conditional analysis and the multivariate modeling of extreme data. Parts I–III about the basic extreme value methodology remain unchanged to some larger extent, yet notable are, e.g., the new sections about "An Overview of Reduced-Bias Estimation" (co-authored by M.I. Gomes), "The Spectral Decomposition Methodology", and "About Tail Independence" (co-authored by M. Frick), and the new chapter about "Extreme Value Statistics of Dependent Random Variables" (co-authored

by H. Drees). Other new topics, e.g., a chapter about "Environmental Sciences", (co--authored by R.W. Katz), are collected within Parts IV–VI.

## **Users Review**

### **From reader reviews:**

#### **Christy Brodersen:**

What do you think of book? It is just for students because they are still students or that for all people in the world, the particular best subject for that? Just simply you can be answered for that issue above. Every person has several personality and hobby for each other. Don't to be compelled someone or something that they don't would like do that. You must know how great and important the book Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields. All type of book are you able to see on many resources. You can look for the internet solutions or other social media.

#### **Carlos Wesley:**

The book untitled Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields is the reserve that recommended to you you just read. You can see the quality of the guide content that will be shown to you. The language that author use to explained their ideas are easily to understand. The author was did a lot of investigation when write the book, so the information that they share to your account is absolutely accurate. You also might get the e-book of Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields from the publisher to make you a lot more enjoy free time.

#### **Stephen Bruns:**

Do you have something that you prefer such as book? The e-book lovers usually prefer to pick book like comic, quick story and the biggest one is novel. Now, why not seeking Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields that give your fun preference will be satisfied through reading this book. Reading practice all over the world can be said as the opportunity for people to know world better then how they react towards the world. It can't be mentioned constantly that reading habit only for the geeky individual but for all of you who wants to become success person. So , for all you who want to start reading through as your good habit, you could pick Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields become your current starter.

#### **Craig Harrison:**

That reserve can make you to feel relax. This kind of book Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields was bright colored and of course has pictures on the website. As we know that book Statistical Analysis of Extreme Values: with Applications to Insurance, Finance, Hydrology and Other Fields has many kinds or category. Start from kids until young adults. For example Naruto or Investigator Conan you can read and think you are the character on there. Therefore not at all of book usually are make you bored, any it can make you feel happy, fun and chill out.

Try to choose the best book for yourself and try to like reading that will.
