

Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences)

By Pradip Majumdar

Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) By Pradip Majumdar

The advent of high-speed computers has encouraged a growing demand for newly graduated engineers to possess the basic skills of computational methods for heat and mass transfer and fluid dynamics. Computational fluid dynamics and heat transfer, as well as finite element codes, are standard tools in the computer-aided design and analysis of processes and products involving coupled transport and multi-physic phenomena. This textbook introduces the fundamentals of two important computational techniques for solving heat and mass transfer and fluid flow problems: finite difference and finite element methods.

The objective of the book is to help the students thoroughly understand the basic concepts and procedures of fluid dynamics, heat and mass transfer and implement computational methodology into a computer code and solve more complex problems on their own. Theory and practice are combined in a simple and straightforward manner. Classic problems in heat transfer, mass transfer, and fluid flows are solved and illustrated through step-by-step derivations and numerous figures. End-of-chapter problems are provided at the end of every chapter for extra practice and homework assignments.

The book is divided into three parts: Part One contains a review of basic equations of heat transfer, mass transfer and fluid dynamics; concepts of numerical approximations and errors; numerical solution techniques for systems of linear algebraic equations; and numerical integrations and quadrature formulas. (The last two topics are included primarily for students who have had no prior course on numerical analysis). Part Two introduces the finite difference/control volume method. Part Three presents the finite element method.

As an introductory text, this book is appropriate for senior undergraduate and first-year graduate level courses. Students taking independent study can use the text as a comprehensive reference guide. Others who will find it a useful resource include practicing engineers and scientists developing their own codes and using commercial codes for the analysis and design of processes and products involving heat and mass transfer and fluid dynamics.

Editorial Review

Review

This extensive work... contains more than an adequate amount of information for two courses at this level. ...The classical principles and methods are presented in a clear and detailed manner, and the many examples are helpful in explaining the methods..

-Choice, March 2006

Users Review

From reader reviews:

Deborah Oneal:

Here thing why this specific Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) are different and trusted to be yours. First of all looking at a book is good however it depends in the content from it which is the content is as delightful as food or not. Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) giving you information deeper and different ways, you can find any e-book out there but there is no publication that similar with Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences). It gives you thrill reading journey, its open up your own personal eyes about the thing that will happened in the world which is perhaps can be happened around you. You can actually bring everywhere like in park your car, café, or even in your technique home by train. In case you are having difficulties in bringing the branded book maybe the form of Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) in e-book can be your substitute.

Donna Young:

Nowadays reading books become more than want or need but also work as a life style. This reading behavior give you lot of advantages. Associate programs you got of course the knowledge the rest of the information inside the book that improve your knowledge and information. The knowledge you get based on what kind of publication you read, if you want have more knowledge just go with education books but if you want truly feel happy read one having theme for entertaining for instance comic or novel. Often the Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) is kind of publication which is giving the reader unstable experience.

Lloyd Schuler:

Are you kind of busy person, only have 10 as well as 15 minute in your morning to upgrading your mind proficiency or thinking skill possibly analytical thinking? Then you are experiencing problem with the book in comparison with can satisfy your short period of time to read it because all of this time you only find guide that need more time to be learn. Computational Methods for Heat and Mass Transfer (Series in

Computational and Physical Processes in Mechanics and Thermal Sciences) can be your answer because it can be read by a person who have those short spare time problems.

Carol Stripling:

As a university student exactly feel bored to reading. If their teacher expected them to go to the library as well as to make summary for some reserve, they are complained. Just tiny students that has reading's heart and soul or real their pastime. They just do what the trainer want, like asked to the library. They go to there but nothing reading critically. Any students feel that reading through is not important, boring as well as can't see colorful pics on there. Yeah, it is to become complicated. Book is very important for yourself. As we know that on this period of time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore, this Computational Methods for Heat and Mass Transfer (Series in Computational and Physical Processes in Mechanics and Thermal Sciences) can make you truly feel more interested to read.
