In the field of industrial ventilation and air quality, a lack of adequate analysis for aerodynamic processes, as well as a shortage of properly equipped computer facilities, has forced specialists to rely on an empirical approach to find answers in the past. Commonly based on crude models, practical data, or countertypes, the answers often offered have been imprecise.

Summarizing the results of the authors' research conducted over the past 40 years, **Industrial Air Quality and Ventilation: Controlling Dust Emissions** examines air injection in granular material streams and defines the closed hood capacity widely used in the mechanical reprocessing of minerals. This book introduces a methodological approach (dynamic theory) that broadens the range of granular materials, including inter-heated material. It considers the mechanisms of ejecting air in different variations from uniform air motion processes in closed chutes to the forming of accelerated air streams in a free particles flow. It also provides the scientific basics of calculation for local exhaust ventilation dust production (aspiration), and enables readers to accurately apply these results to the mechanical processing of various materials.

- Describes the engineering methods for calculating the amounts of aspirated air for various industries and technological units
- Assists in developing new environmentally clean and competitive advanced technologies and equipment for the processing of granular materials
- Proposes new technical solutions that are more sanitary and require less energy

and water consumption

- Looks at specific industry examples of localization of release

Industrial Air Quality and Ventilation: Controlling Dust Emissions proposes low power consumption-based technical solutions and outlines more accurate methods of calculating recommended performance. Richly illustrated with practical suggestions and techniques, the text includes real-world applications in the field of aerodynamic processes within gravitational fluxes of granular material, and encourages the development of new environmentally clean and competitive advanced technologies and equipment for the processing of granular materials.

### Editorial Review

#### Review

"This book summarises the results of the authors research conducted over the past 40 years. ...The conclusion reminds readers that the authors original research was aimed at improving the theoretical basis for design of ventilated suction hoods used for bulk material transfer groups and then to present their basic findings and resulting conclusions."

**?ROSPA**

*"The book addresses the very complex topic of dust generation and fugitive emissions in industry. It provides detailed analyses, theories and data of numerous application areas ? with the aim of improving the design and operation of efficient dust control systems. I have not seen such a detailed study of this complex area before, and I am confident that the book will generate a great deal of interest in both the scientific and industry communities."*

?Peter Wypych, Professor, University of Wollongong

"A solid academic treatise on the evolution of dust and particulates from conveying system transfer points, with a good amount of useful data to go with the theoretical equations."

?Eric Anderson, Consulting Engineer

#### About the Author

**Ivan Nikolayevich Logachev** graduated from the Kharkov Engineering Building Institute in 1962. The author of over 300 scientific papers, and more than 50 inventions and monographs, he is currently a professor at Belgorod State Technological University, Russia.

Konstantin Ivanovich Logachev graduated from the Dnepropetrovsk State University in 1992. Since 1995 he has worked at the Belgorod State Technological University. He is the author of over 150 scientific publications.

#### From reader reviews:

#### Nancy Dabney:

Do you have favorite book? When you have, what is your favorite's book? E-book is very important thing for us to understand everything in the world. Each e-book has different aim as well as goal; it means that e-book has different type. Some people experience enjoy to spend their the perfect time to read a book. They may be reading whatever they consider because their hobby is reading a book. What about the person who don't like studying a book? Sometime, man or woman feel need book when they found difficult problem or maybe exercise. Well, probably you will want this Industrial Air Quality and Ventilation: Controlling Dust

Emissions.

**David Anthony:**

Have you spare time for the day? What do you do when you have a lot more or little spare time? Yes, you can choose the suitable activity to get spend your time. Any person spent their own spare time to take a stroll, shopping, or went to the actual Mall. How about open or maybe read a book titled Industrial Air Quality and Ventilation: Controlling Dust Emissions? Maybe it is to be best activity for you. You recognize beside you can spend your time together with your favorite's book, you can cleverer than before. Do you agree with their opinion or you have other opinion?

**Rachel Robbins:**

Here thing why this particular Industrial Air Quality and Ventilation: Controlling Dust Emissions are different and trusted to be yours. First of all reading through a book is good nonetheless it depends in the content of it which is the content is as delicious as food or not. Industrial Air Quality and Ventilation: Controlling Dust Emissions giving you information deeper and different ways, you can find any reserve out there but there is no e-book that similar with Industrial Air Quality and Ventilation: Controlling Dust Emissions. It gives you thrill reading journey, its open up your own eyes about the thing in which happened in the world which is probably can be happened around you. It is easy to bring everywhere like in area, café, or even in your means home by train. If you are having difficulties in bringing the paper book maybe the form of Industrial Air Quality and Ventilation: Controlling Dust Emissions in e-book can be your alternative.

**Jennifer Bell:**

People live in this new time of lifestyle always make an effort to and must have the free time or they will get lots of stress from both way of life and work. So , when we ask do people have time, we will say absolutely of course. People is human not really a huge robot. Then we question again, what kind of activity have you got when the spare time coming to a person of course your answer can unlimited right. Then do you try this one, reading ebooks. It can be your alternative throughout spending your spare time, often the book you have read is actually Industrial Air Quality and Ventilation: Controlling Dust Emissions.
