Editorial Review

Review

From the reviews:

"Exploration Geophysics focuses primarily on seismic reflection techniques as applied to petroleum exploration ... the book covers data acquisition and processing, migration, and interpretation of seismic data. ... Gadallah and Fisher have extensive experience in petroleum exploration, and this book reflects the type of work they regularly perform. Summing Up: Recommended. Upper-division undergraduate through professional collections." (M. S. Field, Choice, Vol. 46 (9), May, 2009)

"The authors with their extensive experience in petroleum exploration have written a book 'at a level that anyone can understand without difficulty' ... The potential reader will enjoy a book about science of exploration geophysics ... this book recommendable to late undergraduates who are about to use seismic data or are interested in economic geology, and all members of a petroleum/mineral exploration team (e.g., support staff and managers) who want to better understand the concepts, techniques and technologies involved." (Thibaut Perol, Pure and Applied Geophysics, September, 2012)

About the Author

Mamdouh has been involved in the petroleum industry for nearly 40 years as a reservoir engineer and a geophysicist. He has had extensive experience in both seismic data acquisition and processing. He has been an independent consultant in all phases of seismic exploration as well as providing training and development expertise for several years. Mamdouh also is the author of the textbook Reservoir Seismology, published by PennWell Books in 1994.

Ray has more than 40 years experience in geophysics. Thirty years of that experience was in training both professionals and non-professionals in seismic acquisition and processing. Much of that time was spent in developing training material for both in-house and client training

Users Review

From reader reviews:

Shawn Francis:

Do you considered one of people who can't read pleasurable if the sentence chained within the straightway,

hold on guys this kind of aren't like that. This Exploration Geophysics book is readable by you who hate the straight word style. You will find the information here are arrange for enjoyable reading experience without leaving also decrease the knowledge that want to deliver to you. The writer regarding Exploration Geophysics content conveys thinking easily to understand by many individuals. The printed and e-book are not different in the content but it just different such as it. So , do you nevertheless thinking Exploration Geophysics is not loveable to be your top collection reading book?

Raymond Smith:

A lot of people always spent all their free time to vacation as well as go to the outside with them loved ones or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, or even playing video games all day long. In order to try to find a new activity this is look different you can read some sort of book. It is really fun to suit your needs. If you enjoy the book that you read you can spent all day long to reading a reserve. The book Exploration Geophysics it is very good to read. There are a lot of those who recommended this book. These folks were enjoying reading this book. In the event you did not have enough space to bring this book you can buy often the e-book. You can m0ore very easily to read this book from the smart phone. The price is not to cover but this book offers high quality.

Clifford Caldwell:

On this era which is the greater man or woman or who has ability in doing something more are more important than other. Do you want to become considered one of it? It is just simple approach to have that. What you have to do is just spending your time not very much but quite enough to have a look at some books. On the list of books in the top checklist in your reading list is Exploration Geophysics. This book which is qualified as The Hungry Hills can get you closer in turning into precious person. By looking upward and review this reserve you can get many advantages.

Carol Ton:

As we know that book is vital thing to add our information for everything. By a guide we can know everything we would like. A book is a set of written, printed, illustrated as well as blank sheet. Every year was exactly added. This reserve Exploration Geophysics was filled regarding science. Spend your spare time to add your knowledge about your science competence. Some people has distinct feel when they reading any book. If you know how big benefit from a book, you can sense enjoy to read a book. In the modern era like at this point, many ways to get book that you simply wanted.
