Biochemistry of Lipids, Lipoproteins and Membranes, Volume 36, Fourth Edition (New Comprehensive Biochemistry) By J.E. Vance, Dennis E. Vance

The first edition of this book was published in 1985. The content of the 4th edition reflects the enormous advances that have occurred since that time in the field of lipid biochemistry. This publication is unique in that it represents a bridge between the superficial coverage of the lipid field found in basic biochemistry text books and the highly specialized material contained in scientific review articles and monographs. The book is not a collection of exhaustive reviews, but a current and readable summary of diverse aspects of lipids. It is intended as an advanced and up-to-date textbook for teachers and students who are familiar with the basic concepts of lipid biochemistry and will also serve as a general reference book for scientists studying lipids, lipoproteins and membranes.

Editorial Review

Review

W.W. Christie

...this is one of a select group of books in the lipid field that I would expect to find in every biological library.

W.I. Gruszecki

...I would recommend this book both for students who have already taken an introductory course in biochemistry and for scientists researching lipids, lipoproteins and biomembranes.
