

Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics)

By Hongrui Jiang, Xuefeng Zeng

Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) By Hongrui Jiang, Xuefeng Zeng

Due to the development of microscale fabrication methods, microlenses are being used more and more in many unique applications, such as artificial implementations of compound eyes, optical communications, and labs-on-chips. Liquid microlenses, in particular, represent an important and growing research area yet there are no books devoted to this topic that summarize the research to date. Rectifying this deficiency, **Microlenses: Properties, Fabrication and Liquid Lenses** examines the recent progress in the emerging field of liquidbased microlenses.

After describing how certain problems in optics can be solved by liquid microlenses, the book introduces the physics and fabrication methods involved in microlenses. It also details the facility and equipment requirements for general fabrication methods. The authors then present examples of various microlenses with non-tunable and tunable focal lengths based on different mechanisms, including:

- Non-tunable microlenses: Ge/SiO₂ core/shell nanolenses, glass lenses made by isotropic etching, self-assembled lenses and lens arrays, lenses fabricated by direct photo-induced polymerization, lenses formed by thermally reflowing photoresist, lenses formed from inkjet printing, arrays fabricated through molding processes, and injection-molded plastic lenses
- Electrically tuned microlenses: liquid crystal-based lenses and liquid lenses driven by electrostatic forces, dielectrophoretic forces, electrowetting, and electrochemical reactions
- Mechanically tunable microlenses: thin-membrane lenses with varying apertures, pressures, and surface shapes; swellable hydrogel lenses; liquid–liquid interface lenses actuated by environmentally stimuli-responsive hydrogels; and oscillating lens arrays driven by sound waves
- Horizontal microlenses: two-dimensional polymer lenses, tunable and movable liquid droplets as lenses, hydrodynamically tuned cylindrical lenses, liquid core and liquid cladding lenses, air–liquid interface lenses, and tunable liquid gradient refractive index lenses

The book concludes by summarizing the importance of microlenses, shedding light on future microlens work, and exploring related challenges, such as the

Editorial Review

Users Review

From reader reviews:

Jean McFerren:

Book is to be different for each grade. Book for children until adult are different content. As we know that book is very important for all of us. The book Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) has been making you to know about other knowledge and of course you can take more information. It is rather advantages for you. The guide Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) is not only giving you far more new information but also for being your friend when you experience bored. You can spend your own spend time to read your publication. Try to make relationship using the book Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics). You never experience lose out for everything in case you read some books.

Kathleen Duff:

The feeling that you get from Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) will be the more deep you looking the information that hide into the words the more you get interested in reading it. It does not mean that this book is hard to be aware of but Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) giving you excitement feeling of reading. The copy writer conveys their point in specific way that can be understood by means of anyone who read it because the author of this guide is well-known enough. This kind of book also makes your own vocabulary increase well. So it is easy to understand then can go along with you, both in printed or e-book style are available. We suggest you for having this specific Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optocelectronics) instantly.

George Rodriguez:

Reading a e-book can be one of a lot of exercise that everyone in the world adores. Do you like reading book consequently. There are a lot of reasons why people enjoy it. First reading a e-book will give you a lot of new info. When you read a reserve you will get new information due to the fact book is one of a number of ways to share the information or maybe their idea. Second, studying a book will make anyone more imaginative. When you reading a book especially hype book the author will bring someone to imagine the story how the character types do it anything. Third, it is possible to share your knowledge to others. When you read this Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics), you could tells your family, friends and soon about yours book. Your knowledge can inspire different ones, make them reading a guide.

Anne Shibata:

The reason? Because this Microlenses: Properties, Fabrication and Liquid Lenses (Series in Optics and Optoelectronics) is an unordinary book that the inside of the reserve waiting for you to snap the idea but latter it will zap you with the secret it inside. Reading this book close to it was fantastic author who all write the book in such awesome way makes the content interior easier to understand, entertaining way but still convey the meaning fully. So , it is good for you for not hesitating having this any more or you going to regret it. This phenomenal book will give you a lot of positive aspects than the other book possess such as help improving your expertise and your critical thinking technique. So , still want to hold off having that book? If I were being you I will go to the publication store hurriedly.
