**Conquest in Cyberspace: National Security and Information Warfare** By Martin C. Libicki

With billions of computers in existence, cyberspace, 'the virtual world created when they are connected,' is said to be the new medium of power. Computer hackers operating from anywhere can enter cyberspace and take control of other people's computers, stealing their information, corrupting their workings, and shutting them down. Modern societies and militaries, both pervaded by computers, are supposedly at risk. As *Conquest in Cyberspace* explains, however, information systems and information itself are too easily conflated, and persistent mastery over the former is difficult to achieve.
