The Anthropology of Sport and Human Movement: A Biocultural Perspective From Lexington Books

The evolution of the human species has always been closely tied to the relationship between biology and culture, and the human condition is rooted in this fascinating intersection. Sport, games, and competition serve as a nexus for humanity's innate fixation on movement and social activity, and these activities have served throughout history to encourage the proliferation of human culture for any number of exclusive or inclusive motivations: money, fame, health, spirituality, or social and cultural solidarity.

The study of anthropology, as presented in *Anthropology of Sport and Human Movement*, provides a scope that offers a critical and discerning perspective on the complex calculus involving human biological and cultural variation that produces human movement and performance. Each chapter of this compelling collection resonates with the theme of a tightly woven relationship of biology and culture, of evolutionary implications and contemporary biological and cultural expression.

Editorial Review

Review

Recommended. (*CHOICE*, November 2011)

To date the Anthropology of Sport has been dominated by accounts that have emphasized the social and cultural dimensions of such activities. This volume makes a significant contribution to the Anthropology of Sport through the development of a more systematic biocultural approach to sporting activities. What is particularly exciting about this volume is that the authors have been encouraged to explore the interactive and dynamic relationship between culture and biology in such a variety of ways and from such a variety of positions. Framed by Geertz's account of the importance of a concept of culture for human evolution, even while moving well beyond this early attempt, the ethnographic papers in this volume are theorised with a keen sense of the biocultural complexity of human movements. This book will find a place on bookshelves of all of us interested in the meanings and organization of human movement in social life. (Philip Moore, Curtin University of Technology, Australia)

The Anthropology of Sport and Human Movement moves the discussion about the role of sport in human society to a new level, integrating the latest findings of biogenetics and physiology with the insights regarding sport as a cultural phenomenon. The collection is a breakthrough for the discipline, a gold mine of ideas for future research, and important reading for everyone who appreciates and takes seriously the study of human movement, sport, and play. (Kendall Blanchard, Georgia Southwestern State University)

About the Author

Robert R. Sands is a consultant for the Department of Defense for Language, Regional Expertise and Culture programs.

Linda R. Sands is a wildlife biologist and project scientist with CH2M HILL.

Users Review

From reader reviews:

Ruth Brinkman:
