Power Quality: Problems and Mitigation Techniques By Bhim Singh, Ambrish Chandra, Kamal Al-Haddad

Maintaining a stable level of power quality in the distribution network is a growing challenge due to increased use of power electronics converters in domestic, commercial and industrial sectors. Power quality deterioration is manifested in increased losses; poor utilization of distribution systems; mal-operation of sensitive equipment and disturbances to nearby consumers, protective devices, and communication systems. However, as the energy-saving benefits will result in increased AC power processed through power electronics converters, there is a compelling need for improved understanding of mitigation techniques for power quality problems.

This timely book comprehensively identifies, classifies, analyses and quantifies all associated power quality problems, including the direct integration of renewable energy sources in the distribution system, and systematically delivers mitigation techniques to overcome these problems.

Key features:

- Emphasis on in-depth learning of the latest topics in power quality extensively illustrated with waveforms and phasor diagrams.
- Essential theory supported by solved numerical examples, review questions, and unsolved numerical problems to reinforce understanding.
- Companion website contains solutions to unsolved numerical problems, providing hands-on experience.

Senior undergraduate and graduate electrical engineering students and instructors will find this an invaluable resource for education in the field of power quality. It will also support continuing professional development for practicing engineers in distribution and transmission system operators.

Editorial Review

From the Back Cover

Maintaining a stable level of power quality in the distribution network is a growing challenge due to increased use of power electronics converters in domestic, commercial and industrial sectors. Power quality deterioration is manifested in increased losses; poor utilization of distribution systems; mal-operation of sensitive equipment and disturbances to nearby consumers, protective devices, and communication systems. However, as the energy-saving benefits will result in increased AC power processed through power electronics converters, there is a compelling need for improved understanding of mitigation techniques for power quality problems.

This timely book comprehensively identifies, classifies, analyses and quantifies all associated power quality problems, including the direct integration of renewable energy sources in the distribution system, and systematically delivers mitigation techniques to overcome these problems.

Key features:

- Emphasis on in-depth learning of the latest topics in power quality extensively illustrated with waveforms and phasor diagrams.
- Essential theory supported by solved numerical examples, review questions, and unsolved numerical problems to reinforce understanding.
- Companion website contains solutions to unsolved numerical problems, providing hands-on experience.

Senior undergraduate and graduate electrical engineering students and instructors will find this an invaluable resource for education in the field of power quality. It will also support continuing professional development for practicing engineers in distribution and transmission system operators.

About the Author

Professor Bhim Singh has worked at the IIT Delhi Department of Electrical Engineering since 1997. He has 30 years' experience in research, consulting and teaching, has organized more than 40 short term courses and workshops, and has delivered more than 100 invited specialized lectures. He has chaired many international and national conferences, including the IEEE International Conferences on Power Electronics, Drives and Energy Systems in 2006. Professor Singh holds one US and one Indian Patent and has filed nine Indian patents. He is a Fellow of many engineering institutions including the Indian National Academy of Engineering and the Indian Academy of Sciences.

Professor Ambrish Chandra became a Professor in Electrical Engineering Department at ETS in 1999. His main research interest areas are: power quality, active filters, static reactive power compensation, FACTS and control & integration of renewable energy resources. Professor Chandra is a Fellow of many engineering institutions including IEEE, IET (UK), IE (India) as well as a Life Member of the Indian Society for Technical Education (ISTE).

Professor Kamal Al-Haddad has been a Professor within ETS' Electrical Engineering Department since 1990. His research interest areas include: high efficient static power converters, harmonics & reactive power

control using hybrid filters, switch mode & resonant converters, the development of prototypes for various industrial applications in electric traction, and power supply for drives & telecommunication. Professor Al-Haddad is an IEEE Fellow, a Canadian Academy of Engineering Fellow and life member of the Circle of Excellence of the University of Quebec. Presently he is IEEE Industrial Electronics society President Elect.

Users Review

From reader reviews:

Brad Hawkes:

This Power Quality: Problems and Mitigation Techniques book is just not ordinary book, you have it then the world is in your hands. The benefit you obtain by reading this book is usually information inside this e-book incredible fresh, you will get information which is getting deeper anyone read a lot of information you will get. This kind of Power Quality: Problems and Mitigation Techniques without we realize teach the one who looking at it become critical in considering and analyzing. Don't possibly be worry Power Quality: Problems and Mitigation Techniques can bring if you are and not make your carrier space or bookshelves' turn into full because you can have it in your lovely laptop even cell phone. This Power Quality: Problems and Mitigation Techniques having fine arrangement in word as well as layout, so you will not really feel uninterested in reading.

Barry Phelan:

The publication untitled Power Quality: Problems and Mitigation Techniques is the reserve that recommended to you to study. You can see the quality of the publication content that will be shown to anyone. The language that article author use to explained their way of doing something is easily to understand. The writer was did a lot of investigation when write the book, hence the information that they share for your requirements is absolutely accurate. You also will get the e-book of Power Quality: Problems and Mitigation Techniques from the publisher to make you far more enjoy free time.

David Smith:

In this age globalization it is important to someone to obtain information. The information will make anyone to understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of recommendations to get information example: internet, newspaper, book, and soon. You will see that now, a lot of publisher which print many kinds of book. Often the book that recommended to your account is Power Quality: Problems and Mitigation Techniques this book consist a lot of the information in the condition of this world now. This specific book was represented how can the world has grown up. The vocabulary styles that writer require to explain it is easy to understand. The actual writer made some exploration when he makes this book. That's why this book appropriate all of you.

Peter Wilson:

Is it you who having spare time after that spend it whole day by simply watching television programs or just lying on the bed? Do you need something totally new? This Power Quality: Problems and Mitigation

Techniques can be the reply, oh how comes? A fresh book you know. You are and so out of date, spending your spare time by reading in this completely new era is common not a geek activity. So what these books have than the others?
