Geostatistical Simulation: Models and Algorithms By Christian Lantuejoul

🔒 Get Print Book

This book deals with the estimation of natural resources using the Monte Carlo methodology. It includes a set of tools to describe the morphological, statistical and stereological properties of spatial random models. Furthermore, the author presents a wide range of spatial models, including random sets and functions, point processes and object populations applicable to the geosciences. The text is based on a series of courses given in the USA and Latin America to civil, mining and petroleum engineers as well as graduate students in statistics. It is the first book to discuss the geostatistical simulation techniques in such a specific way.

Editorial Review

Review

From the reviews of the first edition:

"Geostatistical simulations have mainly been developed during the last decade. ... this is the first book that is entirely dedicated to this subject. ... it has been a good initiative by C. Lantuéjoul to compile this book and it will become a basic reference work, partly because it is the first work dedicated entirely to this new subject of geostatistics. ... The book mainly aims at researchers who are using geostatistical simulations and who would like to know more about the theoretical background" (André Vervoort, Geologica Belgica, Vol. 7 (3-4), 2004)

"The author has dedicated the book to Georges Matheron, founder of modern geostatistics. Well organized is the book in three parts, namely (i) the tools, (ii) the algorithm and (iii) the models. ... It certainly fills a gap and is therefore welcome to the geostatistics market." (Erik W. Grafarend, Zentralblatt MATH, Vol. 990 (15), 2002)

From the Back Cover

Within the geoscience community the estimation of natural resources is a challenging topic. The difficulties are threefold: Intitially, the design of appropriate models to take account of the complexity of the variables of interest and their interactions. This book discusses a wide range of spatial models, including random sets and functions, point processes and object populations. Secondly,the construction of algorithms which reproduce the variability inherent in the models. Finally, the conditioning of the simulations for the data, which can considerably reduce their variability. Besides the classical algorithm for gaussian random functions, specific algorithms based on markovian iterations are presented for conditioning a wide range of spatial models (boolean model, Voronoi tesselation, substitution random function etc.) This volume is the result of a series of courses given in the USA and Latin America to civil, mining and petroleum engineers, as well as to gradute students is statistics. It is the first book to discuss geostatistical simulation techniques in such a systematic way.

Users Review

From reader reviews:

Benjamin French:

This Geostatistical Simulation: Models and Algorithms book is absolutely not ordinary book, you have it then the world is in your hands. The benefit you get by reading this book is usually information inside this guide incredible fresh, you will get facts which is getting deeper anyone read a lot of information you will get. This particular Geostatistical Simulation: Models and Algorithms without we recognize teach the one who examining it become critical in thinking and analyzing. Don't possibly be worry Geostatistical Simulation: Models and Algorithms can bring when you are and not make your handbag space or bookshelves' come to be full because you can have it inside your lovely laptop even mobile phone. This Geostatistical Simulation: Models and Algorithms having good arrangement in word in addition to layout, so

you will not feel uninterested in reading.

Ebony Thornton:

The book untitled Geostatistical Simulation: Models and Algorithms contain a lot of information on it. The writer explains the girl idea with easy method. The language is very clear and understandable all the people, so do not worry, you can easy to read this. The book was authored by famous author. The author will take you in the new age of literary works. You can easily read this book because you can please read on your smart phone, or device, so you can read the book with anywhere and anytime. If you want to buy the e-book, you can start their official web-site and also order it. Have a nice go through.

Adriana Phillips:

This Geostatistical Simulation: Models and Algorithms is new way for you who has attention to look for some information as it relief your hunger details. Getting deeper you upon it getting knowledge more you know or else you who still having little digest in reading this Geostatistical Simulation: Models and Algorithms can be the light food for yourself because the information inside this particular book is easy to get by means of anyone. These books produce itself in the form which can be reachable by anyone, sure I mean in the e-book type. People who think that in guide form make them feel sleepy even dizzy this publication is the answer. So there is absolutely no in reading a reserve especially this one. You can find what you are looking for. It should be here for you. So , don't miss this! Just read this e-book type for your better life along with knowledge.

Cherry Simard:

Some people said that they feel bored when they reading a guide. They are directly felt that when they get a half parts of the book. You can choose the book Geostatistical Simulation: Models and Algorithms to make your own personal reading is interesting. Your current skill of reading skill is developing when you such as reading. Try to choose simple book to make you enjoy to see it and mingle the feeling about book and studying especially. It is to be initially opinion for you to like to open a book and read it. Beside that the guide Geostatistical Simulation: Models and Algorithms can to be your brand-new friend when you're experience alone and confuse in what must you're doing of their time.
