Energy Security for the EU in the 21st Century: Markets, Geopolitics and Corridors (Routledge Studies in Ecological Economics) From Routledge

Recent developments like the rising trend in crude oil price, the international economic crisis, the civil revolts in Northern Africa and the Middle East, the nuclear threat in Japan after the tsunami, the oil spill in the Gulf of Mexico and the economic growth of emerging countries like China and India have a direct relation to the security of energy supply anywhere in the world. This book provides a comprehensive analysis of energy risks, energy scenarios and energy policies with special reference to the European Union and its member states, emphasizing the economic and geopolitical dimensions of energy security.

The book assesses both quantitatively and qualitatively the socioeconomic and political risks related to the European energy supply, together with the EU's energy relations with other countries. Two innovative indicators have been developed to estimate geopolitical energy risks and energy-related relations with other countries. The book also examines the process of convergence of member states' energy security policies, the path towards a common European energy policy, and the process of Europeanization projected towards the energy corridors through which the EU receive energy imports. In addition, alternative strategic scenarios related to energy risk are assessed. Finally, guidelines for the EU's energy policy and new strategies using energy corridors are suggested in order to maximize EU's energy security.

The book should be of interest to students and researchers across a wide range of subjects, including energy economics and policy, energy and foreign policy in the EU, energy policies in EU member states and several aspects related to international political economy.
