BEA WebLogic Workshop Kick Start By Joseph Weber, Mark Wutka

BEA WebLogic Workshop is a rapid application development tool that makes building Java-based Web service applications simple. With just a basic foundation of Java programming, you can use WebLogic Workshop to develop Web services. *BEA WebLogic Workshop Kick Start* provides everything you need to get started with WebLogic Workshop, including a quick Java primer and appendixes covering the essentials of XML, SOAP and WSDL. Learn the features of WebLogic Workshop and review hundreds of code examples, and explore the inner workings of this new tool.

The book's CD-ROM contains all the source code and examples from the book, plus a 90-day trial version of BEA WebLogic Platform, which includes WebLogic Workshop.

Foreword

Web services have attracted much attention recently as the next "big thing" in computing technology. Vendors of all shapes and sizes have announced their support for Web services technologies, and every month a new Web services conference is popping up somewhere on the globe. With all this hype and attention, sometimes it's difficult to really discover what Web services are, where they fit in your company, what the business case is, and how you can actually get started taking advantage of this technology.

BEA has been working with customers to answer many of these questions, and provide solutions that enable companies to easily construct Web services that meet their needs today. Contrary to the common conception of Web services as a consumer-focused technology, Web services may have the greatest potential as a technology inside enterprises as a new way of tying disparate applications together using standards-based technologies. To make Web services really work in the enterprise, however, it's essential that they meet core enterprise requirements: Web services applications have to exist in a constantly changing IT environment where different applications are built and modified by different people on different schedules. They must accommodate everything from modern J2EE-based applications, to legacy systems, to applications at business partners. They must be able to handle rich and complex information and transmit it between internal and external applications. They must easily interact with other applications to leverage existing investments. They must be robust, reliable, and they must perform. Perhaps most important of all, they have to be easy to build. For Web services to flourish within an organization, all developers will need to be able to build Web services that meet these requirements.

BEA WebLogic Workshop Kick Start introduces you to BEA's new WebLogic Workshop product, a development tool and runtime framework that makes it easy to build powerful Web services that take advantage of the robust, enterprise features of the WebLogic J2EE application server. WebLogic Workshop provides a graphical tool that makes it easy to visualize, develop, and test Web service applications and visual controls that dramatically simplify access to existing resources like databases, packaged applications, Enterprise Java Beans, and other Web services. The Workshop framework provides out-of-the-box support for building Web services that are loosely coupled so that the internal implementation details of an application can be cleanly separated from the "public contract" that a Web service offers to other applications. This makes Workshop Web services flexible in the face of a constantly changing IT environment. Workshop also provides built-in support for asynchronous messaging so that Web service applications can carry on rich, two-way conversations with their clients and accommodate interaction with legacy systems and human users. Finally, Workshop supports easy manipulation of coarse-grained messages so that rich documents can be handled without resorting to tedious XML DOM programming. All of these capabilities can be accessed in a simple, declarative fashion that enables all developers not just J2EE experts to get started building Web services today.

Even if you are new to the Java programming language, or have never built a J2EE application before, I think you'll be surprised how easy it is to get started with Workshop. Working inside the WebLogic Workshop environment, you can focus on the procedural business code that is important to getting your applications built and leave all of the details of Web service and J2EE plumbing to the application framework. BEA WebLogic Workshop Kick Start will give you an introduction to Web services in general, and teach you the few Java and J2EE concepts you'll need to know along the way. Rich with examples, this book illustrates the power of Web services, and will help you realize the value they can bring to your company.

About the Author

Joseph Weber has been working with Java full-time since its early alpha stages and has helped advise a number of Fortune 500 companies on the goals of Java. Joe has served on advisory committees for and taught classes at universities in the Midwest, and continues to be a strong advocate for Java in the educational environment. Most recently, Joe contributed to Sams *Java Web Services Unleashed* (067232363X), due in April 2002.

Mark Wutka is a consultant who specializes in helping companies get the most out of Java. He has built numerous Java, JSP and servlet applications for clients including Delta Airlines, and has taught classes, written articles and books, and given lectures. Recently he has written or contributed to *Special Edition Using J2EE* (0789725037) and *Java Web Services Unleashed* (067232363X).

Users Review

From reader reviews:

Marcus Musick:

Have you spare time for just a day? What do you do when you have more or little spare time? Sure, you can choose the suitable activity with regard to spend your time. Any person spent their own spare time to take a move, shopping, or went to the actual Mall. How about open or perhaps read a book eligible BEA WebLogic Workshop Kick Start? Maybe it is to be best activity for you. You understand beside you can spend your time with your favorite's book, you can cleverer than before. Do you agree with it has the opinion or you have some other opinion?

Betty Casas:

The feeling that you get from BEA WebLogic Workshop Kick Start is the more deep you rooting the information that hide in the words the more you get enthusiastic about reading it. It doesn't mean that this book is hard to understand but BEA WebLogic Workshop Kick Start giving you thrill feeling of reading. The article writer conveys their point in a number of way that can be understood through anyone who read it because the author of this publication is well-known enough. This specific book also makes your personal vocabulary increase well. Therefore it is easy to understand then can go together with you, both in printed or e-book style are available. We advise you for having this specific BEA WebLogic Workshop Kick Start instantly.

Katie Doll:

A lot of people always spent their very own free time to vacation as well as go to the outside with them friends and family or their friend. Do you know? Many a lot of people spent they free time just watching TV, or playing video games all day long. In order to try to find a new activity here is look different you can read a book. It is really fun for you personally. If you enjoy the book which you read you can spent all day every day to reading a book. The book BEA WebLogic Workshop Kick Start it doesn't matter what good to read. There are a lot of those who recommended this book. These were enjoying reading this book. In the event you did not have enough space to develop this book you can buy often the e-book. You can m0ore very easily to read this book out of your smart phone. The price is not too costly but this book features high quality.

Adam Gutierrez:

In this time globalization it is important to someone to obtain information. The information will make you to definitely understand the condition of the world. The health of the world makes the information simpler to share. You can find a lot of sources to get information example: internet, newspapers, book, and soon. You can see that now, a lot of publisher that will print many kinds of book. The actual book that recommended to your account is BEA WebLogic Workshop Kick Start this book consist a lot of the information of the condition of this world now. That book was represented so why is the world has grown up. The language styles that writer require to explain it is easy to understand. The writer made some investigation when he makes this book. That's why this book acceptable all of you.
