Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks)
By K.G. Srinivasa, Anil Kumar Muppalla

This timely text/reference describes the development and implementation of large-scale distributed processing systems using open source tools and technologies. Comprehensive in scope, the book presents state-of-the-art material on building high performance distributed computing systems, providing practical guidance and best practices as well as describing theoretical software frameworks. Features: describes the fundamentals of building scalable software systems for large-scale data processing in the new paradigm of high performance distributed computing; presents an overview of the Hadoop ecosystem, followed by step-by-step instruction on its installation, programming and execution; Reviews the basics of Spark, including resilient distributed datasets, and examines Hadoop streaming and working with Scalding; Provides detailed case studies on approaches to clustering, data classification and regression analysis; Explains the process of creating a working recommender system using Scalding and Spark.

Editorial Review

From the Back Cover

This timely text/reference describes the development and implementation of large-scale distributed processing systems using open source tools and technologies such as Hadoop, Scalding and Spark.

Comprehensive in scope, the book presents state-of-the-art material on building high performance distributed computing systems, providing practical guidance and best practices as well as describing theoretical software frameworks.

Topics and features:

- Describes the fundamentals of building scalable software systems for large-scale data processing in the new paradigm of high performance distributed computing
- Presents an overview of the Hadoop ecosystem, followed by step-by-step instruction on its installation, programming and execution
- Reviews the basics of Spark, including resilient distributed datasets, and examines Hadoop streaming and working with Scalding
- Provides detailed case studies on approaches to clustering, data classification and regression analysis
- Explains the process of creating a working recommender system using Scalding and Spark
- Supplies a complete list of supplementary source code and datasets at an associated website

Fulfilling the need for both introductory material for undergraduate students of computer science and detailed discussions for software engineering professionals, this book will aid a broad audience to understand the esoteric aspects of practical high performance computing through its use of solved problems, research case studies and working source code.

K.G. Srinivasa is Professor and Head of the Department of Computer Science and Engineering at M.S. Ramaiah Institute of Technology (MSRIT), Bangalore, India. His other publications include the Springer title *Soft Computing for Data Mining Applications*. **Anil Kumar Muppalla** is also a researcher at MSRIT.

Users Review

From reader reviews:

James Edwards:

Nowadays reading books become more and more than want or need but also turn into a life style. This reading habit give you lot of advantages. The huge benefits you got of course the knowledge your information inside the book in which improve your knowledge and information. The info you get based on what kind of book you read, if you want drive more knowledge just go with education and learning books but if you want feel happy read one along with theme for entertaining for example comic or novel. Often the Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks) is kind of e-book which is giving the reader unpredictable

experience.

Beverly Dyar:

Reading can called head hangout, why? Because if you find yourself reading a book specially book entitled Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks) the mind will drift away trough every dimension, wandering in every aspect that maybe unidentified for but surely will become your mind friends. Imaging each word written in a reserve then become one web form conclusion and explanation that maybe you never get prior to. The Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks) giving you another experience more than blown away your mind but also giving you useful data for your better life on this era. So now let us teach you the relaxing pattern here is your body and mind are going to be pleased when you are finished examining it, like winning a casino game. Do you want to try this extraordinary paying spare time activity?

Angela Hurd:

Reading a book to become new life style in this year; every people loves to examine a book. When you learn a book you can get a large amount of benefit. When you read publications, you can improve your knowledge, due to the fact book has a lot of information on it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your analysis, you can read education books, but if you want to entertain yourself you can read a fiction books, such us novel, comics, as well as soon. The Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks) provide you with a new experience in examining a book.

Liliana Stevens:

In this age globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information quicker to share. You can find a lot of referrals to get information example: internet, paper, book, and soon. You can view that now, a lot of publisher this print many kinds of book. The actual book that recommended to your account is Guide to High Performance Distributed Computing: Case Studies with Hadoop, Scalding and Spark (Computer Communications and Networks) this publication consist a lot of the information of the condition of this world now. That book was represented so why is the world has grown up. The vocabulary styles that writer use for explain it is easy to understand. Typically the writer made some investigation when he makes this book. Here is why this book appropriate all of you.
