Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) By Trevor Hastie, Robert Tibshirani, Martin Wainwright

Discover New Methods for Dealing with High-Dimensional Data

A sparse statistical model has only a small number of nonzero parameters or weights; therefore, it is much easier to estimate and interpret than a dense model. **Statistical Learning with Sparsity: The Lasso and Generalizations** presents methods that exploit sparsity to help recover the underlying signal in a set of data.

Top experts in this rapidly evolving field, the authors describe the lasso for linear regression and a simple coordinate descent algorithm for its computation. They discuss the application of ?₁ penalties to generalized linear models and support vector machines, cover generalized penalties such as the elastic net and group lasso, and review numerical methods for optimization. They also present statistical inference methods for fitted (lasso) models, including the bootstrap, Bayesian methods, and recently developed approaches. In addition, the book examines matrix decomposition, sparse multivariate analysis, graphical models, and compressed sensing. It concludes with a survey of theoretical results for the lasso.

In this age of big data, the number of features measured on a person or object can be large and might be larger than the number of observations. This book shows how the sparsity assumption allows us to tackle these problems and extract useful and reproducible patterns from big datasets. Data analysts, computer scientists, and theorists will appreciate this thorough and up-to-date treatment of sparse statistical modeling.

Editorial Review

Review

"The authors study and analyze methods using the sparsity property of some statistical models in order to recover the underlying signal in a dataset. They focus on the Lasso technique as an alternative to the standard least-squares method."

?Zentralblatt MATH 1319

"The book includes all the major branches of statistical learning. For each topic, the authors first give a concise introduction of the basic problem, evaluate conventional methods, pointing out their deficiencies, and then introduce a method based on sparsity. Thus, the book has the potential to be the standard textbook on the topic."

?Anand Panangadan, California State University, Fullerton

About the Author

Trevor Hastie is the John A. Overdeck Professor of Statistics at Stanford University. Prior to joining Stanford University, Professor Hastie worked at AT&T Bell Laboratories, where he helped develop the statistical modeling environment popular in the R computing system. Professor Hastie is known for his research in applied statistics, particularly in the fields of data mining, bioinformatics, and machine learning. He has published five books and over 180 research articles in these areas. In 2014, he received the Emanuel and Carol Parzen Prize for Statistical Innovation. He earned a PhD from Stanford University.

Robert Tibshirani is a professor in the Departments of Statistics and Health Research and Policy at Stanford University. He has authored five books, co-authored three books, and published over 200 research articles. He has made important contributions to the analysis of complex datasets, including the lasso and significance analysis of microarrays (SAM). He also co-authored the first study that linked cell phone usage with car accidents, a widely cited article that has played a role in the introduction of legislation that restricts the use of phones while driving. Professor Tibshirani was a recipient of the prestigious COPSS Presidents' Award in 1996 and was elected to the National Academy of Sciences in 2012.

Martin Wainwright is a professor in the Department of Statistics and the Department of Electrical Engineering and Computer Sciences at the University of California, Berkeley. Professor Wainwright is known for theoretical and methodological research at the interface between statistics and computation, with particular emphasis on high-dimensional statistics, machine learning, graphical models, and information theory. He has published over 80 papers and one book in these areas, received the COPSS Presidents' Award in 2014, and was a section lecturer at the International Congress of Mathematicians in 2014. He received

PhD in EECS from the Massachusetts Institute of Technology (MIT).

Users Review

From reader reviews:

Donna Jennings:

Now a day people who Living in the era wherever everything reachable by interact with the internet and the resources included can be true or not need people to be aware of each info they get. How people have to be smart in receiving any information nowadays? Of course the correct answer is reading a book. Reading a book can help individuals out of this uncertainty Information especially this Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) book because book offers you rich data and knowledge. Of course the data in this book hundred pct guarantees there is no doubt in it everbody knows.

Micheal Clothier:

Hey guys, do you really wants to finds a new book to study? May be the book with the name Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) suitable to you? The actual book was written by well-known writer in this era. Often the book untitled Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) is one of several books that will everyone read now. This specific book was inspired many people in the world. When you read this book you will enter the new age that you ever know previous to. The author explained their plan in the simple way, therefore all of people can easily to recognise the core of this book. This book will give you a lots of information about this world now. To help you see the represented of the world in this particular book.

Veronica Shriner:

Spent a free a chance to be fun activity to accomplish! A lot of people spent their spare time with their family, or their friends. Usually they undertaking activity like watching television, planning to beach, or picnic within the park. They actually doing same task every week. Do you feel it? Do you need to something different to fill your own personal free time/ holiday? Can be reading a book may be option to fill your free of charge time/ holiday. The first thing you ask may be what kinds of reserve that you should read. If you want to attempt look for book, may be the e-book untitled Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) can be good book to read. May be it is usually best activity to you.

Aimee Buffington:

In this period globalization it is important to someone to receive information. The information will make professionals understand the condition of the world. The healthiness of the world makes the information simpler to share. You can find a lot of personal references to get information example: internet, classifieds, book, and soon. You can view that now, a lot of publisher in which print many kinds of book. Typically the

book that recommended for you is Statistical Learning with Sparsity: The Lasso and Generalizations (Chapman & Hall/CRC Monographs on Statistics & Applied Probability) this reserve consist a lot of the information on the condition of this world now. This specific book was represented how can the world has grown up. The language styles that writer make usage of to explain it is easy to understand. Often the writer made some investigation when he makes this book. This is why this book ideal all of you.
